Crime patterns are affected by police presence, he said. "As we increase enforcement, the problem tends to move away," Laws said. "As we relax and go back to our regular patrol patterns, sometimes a different problem pops up or the same problem pops up.

Auto burglaries, theft and drug possession make up a bulk of crime committed on campus, he said. "The top three crime areas where crime occurs most on campus, in order, are King Library, University Housing and the parking garages," Laws said.

King Library
According to the Department of Labor, King Library has nearly tripled since 2009, said Lt. Provid Belcastro of UPD.

Belcastro, head of special operations for the city's police department, said petty theft is the most common crime committed within the library. "People lose laptops," he said. "They might leave their backpacks with wallets and things on a desk and walk away. It's a crime of opportunity."

Library property such as books, magazines and DVDs have also been stolen, Belcastro said. "Library laptops have been stolen on occasion," he added.

Belcastro said there have been 35 arrests in and around the library in the past year. "Out of those 35 arrests, 15 were theft-related," he related.

The remaining arrests were narcotics violations and offenses against public morals such as intoxication in public.

Tara Kirtland, a senior hospitality management major, said she wasn't aware of the amount of crime that occurs in the library. "I would have never thought of it," she said.

Kirtland said she never leaves her property unsupervised inside the King Library. "I always leave with all my stuff," she said.

Yung Pham, a facilities and purchasing coordinator for Belcastro, said library security is being increased. "Crime really trying to increase the patrols of library security officers," he said. "We'll have them mopping the floor more often."

Pham said an update to the existing library security cameras within the library is currently underway.

Camera was installed throughout the building in public areas and monitored by library security offices throughout the library's open hours, he said.

Kirtland said she doesn't worry about crime in the building. "I don't stress about it," she said.

UNIVERSITY HOUSING

In 2009, five incidents of sexual crimes were reported within residence halls, according to annual crime data compiled by UPD.

Within Campus Village Buildings A and C, three incidents of rape were reported along with one incident of penetration of a foreign object, and Beaver Hall had one instance of sexual battery, according to UPD data.

Laws said a lot of incidents are alcohol and drug-related. "We're looking at minors in possession of alcohol," he said. "There are a lot of people smoking marijuana or in possession of Ecstasy or methamphetamines.

Property crimes occur frequently within University Housing, the community relations coordinator for Housing, Stacy Humann, stated in an e-mail.

"Most crimes are of opportunity -- someone leaves their laptop in the lounge or their door open and items such as laptops, cell phones, iPods, gift cards and a TV have been taken," Kevina Brown stated. She stated that bicycles are stolen from the Campus Village courtyard.

She stated that there were 29 theft-related incidents in and around the residence halls. Brown stated: "The majority of the thefts were bicycles stolen from the Campus Village courtyard. The rest of the incidents were crimes of opportunity where students left home unlocked or open.

She stated that there have been no incidents of theft with locked entry, and that crime has lessened within the dorms in the last few years.

"In order to use recycled water in the same building in which it was collected, the city's Environmental Services Web site stated that after primary treatment, biological treatment, filtration and disinfection, recycled water is certified by the California Department of Health Services as safe for virtually any use except as drinking water, because recycled water is continuously monitored, and tested using standards set by the U.S. Environmental Protection Agency, Regional Water Quality Control Board and California Department of Health Services.

"In order to use recycled water in the same building as a potable water, there has to be separation," said Clara Water Pollution Control Plant.

"The members are all pictorial arts students who wanted a club of their own," she said. "The illustrators and animators had their Shrunk-Headman (club) and the glass guild has the glass guild and ceramics had ceramics club," she said. "The fine artists didn't have anywhere to go. We were like, 'You know what? Let's start our own group.'"

The event centered around a large canvas, where club members painted, sanded and splattered with brushes, hands and feet, all the while encouraging curious onlookers to participate. "At first they're a little scared and a little shy to get their hands dirty," Salazar said. "But it seems we've been doing a pretty good job of talking them into it."

King Library to circulate recycled water

Starting this summer, when patrons flush any of the six toilets or 12 urinals on any of the eight floors of King Library, the waste will be carried away by recycled water, according to a February 16 news release by the SJSU Office of Public Affairs.

Construction crews broke ground on the east side of the Dr. Martin Luther King, Jr. Library in late February to install new plumbing needed to connect to the city’s recycled water main under San Fernando Street.

"Best assured that it (the recycled water) will look and smell exactly the same as a regular water, though you really shouldn’t taste it," stated its Office of Public Affairs in the news release.

Recycled water is created at the San Jose/Santa Clara Water Pollution Control Plant where wastewater undergoes four distinct treatment steps before it is considered fit for re-use, according to the San Jose Environmental Services Web site.

The city’s Environmental Services Web site stated that after primary treatment, biological treatment, filtration and disinfection, recycled water is certified by the California Department of Health Services as safe for virtually any use except as drinking water, because recycled water is continuously monitored, and tested using standards set by the U.S. Environmental Protection Agency, Regional Water Quality Control Board and California Department of Health Services.

According to the San Jose Environmental Services Web site, water recycling holds numerous benefits, including the conservation of drinking water supplies, environmental protection and providing a drought-proof water supply. “South Bay Water Recycling provides a sustainable, high-quality water supply that reduces our dependency on potable water,” CFO Galen Goorman said. “Every gallon of recycled water conservation saves a gallon of precious drinking water, preserving our drinking water for our current and future generations.”

In 2005, a South Bay Water Recycling project was designed to supply recycled water from the San Jose/Santa Clara Water Pollution Control Plant to King Library, City Hall, the Fifth Street/Civic Plaza and the new San Jose Performing Arts Center. The project was delayed due to funding issues, joint ownership decisions and, of course, to ensure that the appropriate measures were taken as per the California Department of Public Health,” said Tom Gunterson, a representative of the Environmental Services Department at South Bay Water Recycling.

The project’s secured stimulus funding from the American Recovery and Reinvestment Act was and able to move forward when the city installed recycled water feedlines in the vicinity of the King Library building, according to the “Greening of the Campus” document. “The process was delayed due to funding issues, joint ownership decisions and, of course, to ensure that the appropriate measures were taken as per the California Department of Public Health,” said Tom Gunterson, a representative of the Environmental Services Department at South Bay Water Recycling.

Spring is here and summer is just around the corner. It’s that time of year where pedicures are a must and sandals rule the racks.

Most girls can admit they love shoes, and some may even call it a problem. Whether it be heels, flats or tennis shoes, some girls get weak in the knees when they spot a pair they must have.

But there are situations where a pair of shoes can complete an outfit or become the center of an entire outfit. As seen in previous seasons, light- and mid-tone neutral shoes are reappearing, as well as tans, taupes and creams.

If you prefer a bit of color on your feet, there will still be several neutral-shades of choice from this spring, with shades of blues and greens popping off the runways.

The gladiator sandal is a must-have. An edgeier, trendier version of just the normal T-strap or flip-flop sandal, the gladiator sandal is versatile and can be worn with any one of these spring trends.

To give these Roman-inspired sandals a modern look, many designers have adorned them with pyramid studs and rhinestones to fulfill every girl’s style.

Another piece of spring foot-candy is the nomad sandal. This sandal looks like the traditional T-strap sandal, but has suede or leather wrapped around the ankle. Some nomad sandals wrap up to the shin.

The gladiator and the nomad sandals are neutral in color and tone and would complement any daytime spring look. Another seasonal trend, and all-around favorite, is the balletine flat.

These feminine, but edgy, shoes can be worn with almost anything, from dresses to boy shorts, and come in many styles. Flats with sequins, studs, bows and pearls is an essential this spring.

After spending a couple of seasons hanging out in the back of closets, wedges have made their comeback for spring 2010. Feel free to let the inner animal come out as animal-print wedges are a more comfortable and trendy alternative to the stiletto this spring.

When walking, there is more support from a thicker wedge than a skinny heel.

Another heel making a statement this spring is the animal-inspired peep-toe bootie. Booties with camouflage coloring and straps have been up and down the runways this season — from Guess to Marc Jacobs, the bootie is all the rage this spring.

People may wonder why some girls love shopping for shoes and it may be because shoes say so much about an outfit.

A pair of heels can dress up a pair of denim and a pair of flats can give a skirt and blouse a casual feel. Shoes, along with handbags, can display quality and craftsmanship.

How heels are created and put together and how leather is cut, formed and stretched to form sandals and flats can tell a lot about how a shoe was made. A woman’s shoes can go a long way toward telling who she is, what she is like, and what she does with her life.

In the movie “Forrest Gump,” it was Mrs. Gump who said that you could tell a lot about a person by the type of shoes they wear, and she was right.

Shoes, just like clothes, can represent a person entirely.

**Look of the Week**

**Name:** Eddie Parker

**Year, Major:** Senior, Psychology

**What inspired your look today?**

I like to dress differently because I don’t like looking normal.

**What do you hate most about fashion?**

I honestly probably hate seasons and how some things are more fashionable in one season and not in the next because half the time we’re indoors anyway.

**Where are your favorite places to shop?**

H&M, Express and Hot Topic

**In what clothing are you the happiest?**

I’ve had my style described as “ghetto rocker,” so I think I’m just going to go with that one.

**What is your most treasured item of clothing or accessory and why?**

My rings, because I’m addicted to shiny objects and my hands just feel naked without them.

Scott Vogt

While nursing an injury she sustained in the early part of last season, Adriana Vogt said she watched as her teammates closed out the third period trailing 7-4 against fourth-ranked Hawaii University. Co-captain for the SJSU women’s water polo team, Vogt said she was astonished at how the team came together in a show of determination, rallying to win the match in overtime 10-8. "I have the utmost respect for these girls," the junior kinesiology major said. "It was almost beautiful to watch. They put all their efforts in and did everything they could and won. It was amazing!"

Currently in her third year as a utility player on the team, Vogt was chosen by her teammates to be co-captain this season along with senior Kathryn Hannum, head coach Lou Tully said. "You can’t ask for anything more," Vogt said about being named a co-captain. "Your peers respect you enough and see the effort that you put in, they want you to lead them, especially when we play games that leaders are needed." Vogt said she took interest in the sport a month later, and by the time she was 12 years old, began competing against boys in various club tournaments. In her later years, Vogt would go on to become a Junior Olympic All-American as well as the Hawaiian Invitational’s Most Valuable Player, according to the Spartan Athletics Web site.

"It’s my life right now," Vogt said. "It’s a job, but it’s also something that I love to do. It tell the girls that if you’re going to be here, love and enjoy it. Take it very seriously, but at the same time make sure that you have fun too.

Anna Natalizio, an undeclared freshman and team member, said Vogt has a keen awareness of what goes on during a game and possesses the qualities needed to be a good team captain. "She’s like a coach in the water," Natalizio said. "She always has constructive criticism to give and she’ll help you with any questions about what we’re doing."

Tully said Vogt came to SJSU as a knowledgeable player with a solid water polo background that stemmed from a remarkable high school career at Sacred Heart Preparatory in Menlo Park, Calif. According to the Spartan Athletics Web site, she was a three-time All-West Catholic Athletic League and All-Central Coast Section choice in her senior year of high school.

At the end of each quarter during games, Natalizio said Vogt would get the team together for a brief ideology and disease strategy, and if they weren’t playing their best, Vogt would lead the meeting to try to motivate her teammates. "There’s also the emotional aspect that you need to kind of light a fire under people," Vogt said. "(Kathryn) and I usually try and do our best to get people going."

It’s Vogt’s hard work and knowledge of the game, Tully said, that made her valuable as both a player and as co-captain of the team. He said she’s really stepped up when the team has looked to her for leadership, which he attributes to her attitude. "My personal standpoint when I play — I take it personally if someone can shut me down," Vogt said. "If their goal is ‘Don’t let her shoot from the outside,’ I will make it a point to get a shot off from that side. I’ve worked too hard just to let someone put me down, and that’s how I see it.”
Like many other vacationers, I got a wicked sunburn over spring break. No, I didn't get it from passing the time with a book. I was soaking wet in my seat, even though I usually get canceled.

Put me in the sunshine on a summer day and I turn into a grumpy, cranky and various other melancholy emotion. Sometimes I wonder if the author has given me that day. I can come up with something creative or relax under a breeze while getting lost in whatever world the author has given me that day.

The joy of stepping onto the beach, throwing down a towel and basking in the sun's rays in a brightly colored swimsuit is only possible in the warm weather. There are so many more things to enjoy with warm weather and the bliss of summertime.

One cold-hearted dude

Sunshine and summertime

Sitting on my redwood on Independence Day to watch fireworks explode into a mess of fantastical colors above my head is only possible in the summer. My all-time favorite summer pastimes is sitting barefoot on my porch with my nose in a good book and just feeling a summer breeze while getting lost in whatever world the author has given me that day. I put me in the sunshine on a summer day and I can come up with something creative or relaxing to do with my time and energy.

Put me in the cold or rain and I turn into cranky, cranky and various other melancholy emotions until the sun comes out again.
Oscar, I’m going to tell you my wish.

I was never afraid for my life.

I was just afraid for my life. I lived in a world of torture. My parents beat me.

I was afraid for my life.

I was afraid to have a home. I was afraid of my parents. I was afraid of my parents’ alcoholism.

I was afraid of my parents’ alcoholism. I was afraid of my parents’ alcoholism. I was afraid of my parents’ alcoholism.

I was never afraid of being beaten. I was afraid of being beaten.

I was afraid of my parents. I was afraid of my parents.

I was afraid of my parents. I was afraid of my parents.

I was afraid of my parents. I was afraid of my parents.

Crime From Page 1

“We’re going to go to more crime violations there than we will on campus, he said, a classroom where nobody no-
tins it somebody came in and made a TV set for two or three weeks,” he said.

Parking Garages

On March 22, the Spartan Daily reported that property crimes such as burglary, motor vehi-
cle theft and vandalism in the SJSU parking garages have slightly increased. Laws said radioed auto thefts are a good example of crimes having a cycle on campus. “Over the last six months or so, we’ve had a higher rate of auto theft here on campus than we normally do,” he said. “But as soon as arrows get made, that drops off, or, in other words to move on to another area. We don’t have a lot of auto theft, so a few numbers make a big difference to us.” He said auto break-ins, in which cars are broken into, also occur.

“We don’t have that as much now that people aren’t parking car stuff anymore, but it does still happen,” he said. “Those will come, and thereby I’ll feel unsafe,” Kirtland said.

Hospitality management major Kirtland said, as a commuter, he pays attention when he sees crime alerts posted in the parking garages.

“Some more I saw up at the doors makes me feel unsafe,” Kirtland said.

Kirtland said Rose, a senior hospitality management major, said she has heard that a lot of crime occurs within the parking garages.

Because of this, Kirtland said both she and Rose primarily park in the Fourth Street garage and walk together to one car.

“I’ll park on the second level, and if she’s on the fourth, I’ll just drive her up,” Kirtland said.

Hien Nguyen, a freshmen computer engineering major, said hearing about the robbery inside 10th Street garage “gave my heart an awakening of March случилось.

“I was pretty scared, because I come out of my dorm, and I always feel unsafe,” Kirtland said.

Larry Carr, associate vice president and department chair of public affairs, said UPD “cannot do much about that. We don’t have a lot of auto theft, so a few numbers make a big difference to us.”

“Until arrest get made, that drops off, or, in other words to move on to another area. We don’t have a lot of auto theft, so a few numbers make a big difference to us.”

He said he is now more aware of his surroundings to stay safe.

Campus Safety

The campus is much safer in comparison to the surrounding community, Laws said.

“The community depends on a city police de-
partment that is understaffed and overworked in
its necessities,” he said. “We’re able to provide a very high level of service to the University. The city is not able to provide as high a level of service to the com-

munity around us. At some level, the community around us does depend on us to provide some level of service as well.”

Mark Correa, an associate professor and de-
partment chair of justice studies, said the types of crimes reported are generally from individuals out-
side of campus.

“Even though it’s a pretty large student body, if a student does something like that and the student is seen on campus a lot, they’re going to be more immediately identified,” he said. “Especially in those person-
to-person crimes. It seems like those would prob-
ably be done by people coming onto campus.”

Correa said people should be careful what they ask for when asked whether installation of survei-
lance cameras in the garages and around campus could solve these issues.

“Cameras aren’t going to do much,” he said. “We can video-
tape what’s happening, but what good does that do? Cameras don’t seem to be the best deterrent. The perception that they’re go-
in to make people safer isn’t necessarily the reality.”

He said people need to pay more attention to their sur-
roundings.

“You watch people walking to their car; they’re not paying at-
tention,” he said. “They’ve got their headphones on. They’ve got their backpacks with their computers and their books and they’re just not really paying attention to around them.”

UPD increasing patrols and ini-
tiating random patrols couldn’t make a difference, he said.

Hospitality management major Rose said she would like to see more patrols at night.

“Especially in those person-
to-person crimes. It seems like those would prob-
ably be done by people coming onto campus.”

Mark Correa, assistant professor and de-
partment chair of justice studies

"I never really see them," she said. “I think it’d be better if they stepped it up a notch that way, espe-
cially during night time, at least near the garages.”

UPD Rating

Larry Carr, associate vice presi-
dent of public affairs, said UPD “cannot do much about that. We don’t have a lot of auto theft, so a few numbers make a big difference to us.”

“Until arrest get made, that drops off, or, in other words to move on to another area. We don’t have a lot of auto theft, so a few numbers make a big difference to us.”

“If I ever see one, I’ll just drive her up,” Kirtland said.

Hien Nguyen said he often sees UPD patrolling a lot,” he said. “It’s nice to see them out in the dorm area in the quad. They patrol a lot,” he said. “It’s nice to see them out. It gives me a sense of security.”

Industrial technology major Wright said he thinks UPD “is they seem to be fairly trustwor-
thy, especially in those person-
to-person crimes. It seems like those would prob-
ably be done by people coming onto campus.”

Correa said people should be careful what they ask for when asked whether installation of survei-
lance cameras in the garages and around campus could solve these issues.

“Cameras aren’t going to do much,” he said. “We can video-
tape what’s happening, but what good does that do? Cameras don’t seem to be the best deterrent. The perception that they’re go-
in to make people safer isn’t necessarily the reality.”

He said people need to pay more attention to their sur-
roundings.

“You watch people walking to their car; they’re not paying at-
tention,” he said. “They’ve got their headphones on. They’ve got their backpacks with their computers and their books and they’re just not really paying attention to around them.”

UPD increasing patrols and ini-
tiating random patrols couldn’t make a difference, he said.

Hospitality management major Rose said she would like to see more patrols at night.
