Students formed club to combat misunderstandings

Club-member Rhett Lee said she has been a member of the Disabled Students Association for a while, but has not been to the meetings. She said she joined to meet more people and is starting to get back into it.

“I’m a big advocate of disabilities on and off campus,” she said. “I want to spread disability awareness on campus.”

The campus should be inclusive to people with disabilities, according to Lee.

“There are many organizations on campus, but not many disability organizations, even though there are many disabled students on campus,” Lee said.

According to MacKay, the Disability Resource Center provides support and services for 1,200 disabled students and campus employees.

MacKay said both disabled and non-disabled students attend the club meetings.

“The club tries to cater to all students who come to the meetings by making sure everyone feels comfortable asking questions and sharing anything,” he said.

“We welcome anyone who walks through our doors,” he said.

According to MacKay, there are officially 15 members in the club, but only a few attend the meetings.

“When there’s a problem, we teach you to be your own advocate. And the Disability Resource Center does provide training for that, to teach you how to help ourselves,” said MacKay.

But when an issue arises with a faculty member or professor, they are basically on their own, he said.

According to MacKay, the Disabled Students Association provides info to help students with these issues.

“There’s a lot of ignorance on campus simply because people don’t know or there’s the shock factor,” he said. “They don’t know how to handle it simply because they don’t have the training.”

Center: Public transportation emphasized in new projects

FROM PAGE 1

Deeley said he had a hard time passing the course because he is defiant and likes to figure things out on his own.

“I’m what you call a lone wolf,” he said.

According to Deeley, he learned to lean on the Disability Resource Center for help and that is what got him through in Composition 1 by letting him take the course again.

“If you seek every tool that you can find, in time you’ll be a bit further in life. It will take some of the pain off your shoulders, make things easier. You don’t have to do things alone,” said Deeley.

“There are others that will help you, kind of guide you through what you need to do,” he said.

According to MacKay, the pair put what they’ve learned from these experiences into the Disabled Students Association.

MacKay said the institute receives oversight from a board of trustees who represent all Americans.

“The institute and its consortium partners address both policy and technical challenges with an emphasis on livable communities,” he said.

“MTI realizes the importance of public transportation to seniors, low-income people and those with limited mobility,” he stated in an email. “Often, this is a primary tool for employment and independent living. MTI and the Consortium partners will continue to investigate ways to ensure that transportation services remains accessible and available for all Americans.”

Russo determined to play baseball for as long as possible

David Wayne Russo, a 22-year-old Monterey native, began his baseball career at five years old, when his dad handed him his first glove. "My dad was a big sports guy and baseball was his love," he said. "He kind of passed that down to me." Russo’s dad was on a traveling team when he was growing up, so he had an early exposure of traveling with his parents while his dad played.

**If baseball doesn’t work out there’s always the option of going into the real world.**

David Wayne Russo, Senior pitcher

According to Russo, baseball is the one who taught him how to play. "My dad had always been a part of my success," he said. Russo comes from a tight-knit Italian family, and when he first started at SJSU, he wouldn’t return home every other weekend just to get a home-cooked meal from mom. Russo said his mom has been a positive force in his life. "My mom was always there," he said.

Russo played a year of water polo in high school, according to SJSU Athletics. Michael Fowler and J.J. Sherrill, Russo’s former Monterey High School coaches, agree that he is a solid worker. "The thing that separated David Wayne was that he had great work ethic," Sherrill said. One memory Sherrill has of Russo is when he pitched against St. Francis in his freshman year, who were the top baseball team in the Central Coast Section that season. It was Russo’s senior year and he collected 12 strikeouts — the team lost but Sherrill said it was a great game. Russo played his way into the starting rotation and made his first start against San Jose as a freshman in the fall of 2009 after receiving a scholarship.

"He really stepped up to that challenge," Sherrill said. That same year, Russo set the single-season school record for strikeouts with 128, according to SJSU Athletics. Fowler says Russo is competitive, honest and humble. "He takes everything in stride, he’s very down-to-earth," he said. Fowler said Russo has integrity and his hard work has put him in a position to succeed in his career. "He would never let anyone tell him he could not achieve any goal he had for himself," Sherrill said. According to Fowler, Russo was determined to play baseball at a high level.

"If baseball doesn’t work out there’s always the option of going into the real world," he said. Russo said he hasn’t put a lot of thought into what he wants to do with his life after college, but said he hopes to move on to the next level. "If baseball doesn’t work out there’s always the option of going into the real world," he said. Russo Terrill is a Spartan Daily staff writer.
**LETTER TO THE EDITOR**

**If you have not been informed about the new online course, do so. They have even been advertised in this newspaper. The course has offered 10-credit course that range from different Calculus to Global Change with emphasis on class discussions. I’m glad to know that the access to this class is available for new students as well, which are not the right age group. You can imagine having to enroll a professor every time you have a question or a doubt about the material.**

**Dear Editor,**

I agree with the current discussion about the dangers of smoking. Smoking affects not only the individual who is smoking, but also the people around them. It is important for individuals to be aware of the risks associated with smoking and to make informed decisions about their smoking habits.

**I am writing this letter to express my concern about the recent advertisements for online courses in calculus and global change. While these courses may provide valuable learning opportunities, it is important for students to be aware of the potential drawbacks of taking online courses.**

**Firstly, the lack of face-to-face interaction with instructors can limit the ability to ask questions and receive immediate feedback. This can make it challenging for students who may struggle with understanding the course material.**

**Secondly, the lack of personalized attention from instructors can be a drawback of online courses. In contrast, traditional classroom settings allow for more individualized attention and support, which can be crucial for students who need extra help.**

**Finally, the lack of immediate feedback from instructors can be a concern for students who are taking online courses. It can be difficult to receive timely feedback on assignments and exams, which can impact students' ability to improve their understanding of the course material.**

**I hope that the Spartan Daily can continue to bring attention to these issues and provide valuable insights into the online learning environment.**

**Sincerely,**

U.S. consolidates Afghan bases, plans to leave

By Jay Price
McCleary Tribune

FORWARD OPERATING BASE APACHE, Afghanistan – At FOB Apache, U.S. military engineers are frantically finishing a second council hall building, a new recreational building four times bigger than the old one. The gym will be expanded soon to more than double its current size, and dozens of new tiers and rows of plush white commoditized housing units are sprouting to prepare for an influx of troops who will raise the base’s population from several hundred to a few thousand.

Here, amid the shriek of electric saws and sharp scent of fresh plywood, the U.S. and NATO drawdown looks more like a frenzied building.

It’s deceptive. The building boom at FOB Apache is a quirk of the planned pullout of more than half the U.S. and NATO forces this year. It’s one of the largest of a handful of construction projects under way across Afghanistan, aimed at fine-tuning where troops and their equipment are based in preparation for their final departure next year.

FOB Apache is taking in troops from about half a dozen smaller, front-line bases elsewhere in Zabul province — which is in the east-central, U.S. military heart of the country — so that those bases can be torn down or handed over to the Afghans. It’s adjacent to a major Afghan army base, Camp Eagle, which makes it easier for U.S. troops at Apache to perform their new main roles easier for U.S. troops at Apache, Camp Eagle, which makes it easier for U.S. troops at Apache to perform their new main roles.

Col. Andrew S. Ring, who oversees the Afghans, said Lt. Gen. Jack Stavridis has told him, “As the Afghans take the lead, we’ve got to have someplace to hand them over to.”

Ring, said the Afghans are not prepared to handle all of the equipment coming out of Afghanistan, so the U.S. and NATO are moving it to FOB Apache by rail through Central Asia to Uzbekistan. More than 100 railcars are expected to leave on what is supposed to be the final week of December.

“Now the hard part is beginning,” Ring said. His task force is housed in a three-story compound at the base’s central chow hall.

The deconstruction of bases is about to accelerate, said Col. Nicholas Katers, the 555th’s commander.

“Mo-mentum gained in the last 15 months looks like a rapid slide,” he said. The Americans have been in the beginning of this year. Near all of these were tiny bases as the fighting season ends — will leave little manpower for the missions by next year.

The engineers need to finish most of the tear-downs and refits this year, as the drawdown — which is aimed at fine-tuning where troops and their equipment are based in preparation for their final departure next year, as the drawdown — which is one of the largest of a handful of construction projects under way across Afghanistan, aimed at fine-tuning where troops and their equipment are based in preparation for their final departure next year.
